

# NT-EGRC

## Hi-Performance EGR Cooler for Ford 6.0L Power Stroke Diesel

above: Our upgraded EGR Cooler left, Ford Stock Part at right

NT Shoptools' EGR Cooler, shown above

Thick Walled Stainless Steel Core

### The fix for a well-known issue:

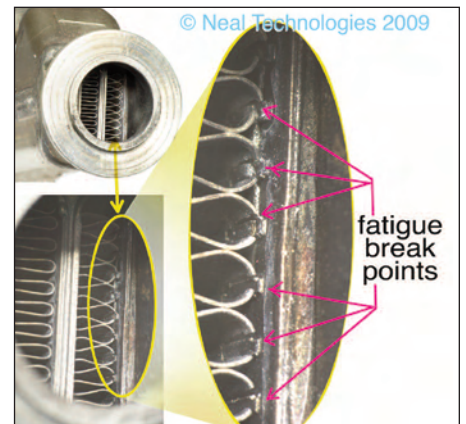

Most Power Stroke owners love their trucks, but know Ford had a problem (or two!) with the **6.0L diesel engines**. The NT-EGRC addresses the problems with the stock **Ford EGR Cooler** on all trucks since 9/22/03.

We have seen a high failure rate in Ford's stock part. Servicing these repairs was often a no-win situation, as "parts failure" translates to "shop failure" in the customer's eyes.

*See photos below to see how these stock parts fail.*

### Upgraded and Improved Features Include:

- **Fixed Right** – At an average repair cost of \$1000 for each failure, repeating the same repair makes no sense; though, upgrading does.
- **Street Legal** – No "Just Living with it" sustained "Check Engine Light" by bypassing the EGR System. No possible vehicle inspection failures due to bypass and possibly voiding the factory or extended warranty.
- **Excellent Performance** – This upgrade allows the engine and computer to continue to work the way Ford intended them to work.
- **Compatible with High Performance Upgrades** – This upgrade allows for EGR compatibility with high-performance after-market additions, including performance chips, increased turbo boost, larger injectors, etc .
- **Helps Prevent Engine Damage** – Hydro-locking, overheating and internal engine damage are all possibilities when the Ford Stock Cooler fails.
- **Increased Reliability** –Welded stainless steel design will give you peace-of-mind when working, traveling or towing.
- **Warranty** - This product comes with a full one-year, parts-only warranty.
- **Multiple Solutions** – The 6.0L engine has two different possibilities for EGR Coolers, we offer both. (see below)

Ford Stock EGR Cooler, core shown
